

Project Management As a Service

INTRODUCTION

Significant pressure to reduce project cost without compromising delivery schedule and expected results tops the agenda of management teams. The lack of a clear approach and roadmap for reducing cost and continuing the successful delivery of projects makes it difficult for project managers and executives to ensure project success.

While addressing project delivery cost reduction efforts there are key project management activities that need to be continued including those that:

- Optimize sourcing and management of project management resources
- Enable the quality and consistency of project execution
- Increase process maturity and better integrate supporting tools
- Improve the quality and reliability of project estimates
- Provide greater visibility of portfolio performance and status

PROJECT MANAGEMENT AS A SERVICE

Prescient provides a managed service environment, Project Management as a Service (PMaaS), which is an innovative solution to address management challenges in providing consistent and scalable project management services. PMaaS is a project management approach that addresses the challenges of the full project delivery lifecycle. Introduced in three phases, PMaaS includes assessing the current state, establishing the operating environment and service levels, and managing the project delivery process.

READINESS PHASE

- Assess the Current State
- Establish PMaaS Objectives
- Define the Framework
- Define Processes and Structure
- Initial Service Catalog, Cost Model

DEPLOYMENT PHASE

- Launch PMaaS Program
- Service Catalog, and SLA's completed
- Staffing Demand - Forecasting
- Measurements and Metrics

PMaaS PHASE

- Portfolio Management Approach
- PPM Processes, Standards, and Artifacts
- Program Execution & Continuous Improvement

PRESCIENT ADVANTAGE:

- Thought Leadership & Domain focus in Energy, AEC, Technology Services, Manufacturing, Retail & Logistics, Federal
- Technology leadership - Centers of Excellence, Intellectual Properties and Pre-Integrated Solutions
- Global Delivery Mode!
- Proven track record of success for global 2000 clients

KEY BENEFITS

Implementing Prescient's Project Management as a Service solution enables organizations to achieve key project management objectives that:

- Expand project delivery capability allowing "more to be done with less"
- Introduce delivery efficiency by improving current project management process and artifacts
- Increase customer satisfaction by exceeding expected project value
- Improve project delivery transparency to all stakeholders by utilizing defined metrics
